

RFP Intelligence Portal

An Automatic RFP Review Tool

SPS Internship Project

Prepared by

Sarosh Majeed

July 2026

What This Project Is

This project is a smart desktop tool that reads a Request for Proposal and studies it on its own. A Request for Proposal, usually called an RFP, is a document that a client shares when they want companies to send in a bid for a project. These documents are often very long, sometimes seventy pages or more. Reading all of that by hand takes a lot of time. My tool reads the whole document in a few seconds and shows only the parts that matter.

The Problem

Every time a new RFP arrives, the team has to search through all the pages to find three important things. The first is the list of things the client wants the company to deliver. The second is the way the client will score and judge the proposal. The third is the full set of rules the company must follow so that the bid is not rejected. Doing this by hand is slow and tiring, and it is easy to miss something. Missing even one rule can cost the whole bid. This tool removes that risk.

What The Tool Does

You give the tool an RFP file and it does the reading for you. In one clean screen it shows the deliverables, the evaluation criteria, and a full compliance checklist that is sorted by department. On top of that it gives a clear Go or No Go suggestion, so the team can quickly decide whether the bid is worth going after.

How It Works, Step By Step

Here is the full journey from the file to the final answer.

- Step one, upload the file. You open the tool in your web browser and upload the RFP. The tool accepts PDF files, Word files, and plain text files.
- Step two, read the text. The tool opens the file and reads all of the writing inside it. If the file is only a scanned picture of the pages, the tool uses a feature called OCR, which turns pictures of text into real text, so nothing is skipped.
- Step three, understand the meaning. A small artificial intelligence model studies the meaning of each line. It does not only look for exact words. It understands the idea behind the words, so it can still find a rule even when the RFP says it in a different way.
- Step four, pull out the key points. The tool collects the deliverables, the evaluation criteria, and the compliance points.
- Step five, compare with the checklist. The tool checks everything it found against the company checklist. This checklist is grouped into four departments.

- Step six, show the results. For every checklist item the tool gives a simple result and a short reason. It also shows the scores and a final Go or No Go suggestion.

The Company Checklist And The Four Departments

The company checklist is built inside the tool. It lists everything the four departments care about, and the tool checks the RFP against each of these points.

- Financial and Accounting. This department looks at payment terms, financial stability, insurance, profit, and any bid bond.
- Legal. This department looks at who is allowed to bid, the skills that are required, the laws to follow, company registration, the E Verify rule, and the contract terms.
- Operations. This department looks at the required forms, the submission deadline, the format rules, who must sign the papers, small business or MBE participation, and vendor registration.
- Technical. This department looks at the scope of work, the technical needs, the industry standards, the security needs, and how the system must connect with theirs.

The Go And No Go Rules

Some rules are strict and can decide the answer on their own. The tool checks these automatically and, very importantly, it always explains its decision by pointing to the exact company rule.

- Payment terms. If the RFP asks for payment within thirty days, written as NET30, that matches the company policy and the result is Go. If it asks for a longer wait, the result becomes a review item that must go to the Accounting team for approval.
- Insurance. The company policy allows insurance cover up to five million dollars. If the RFP asks for more than five million dollars, the result is No Go. The tool then writes the reason clearly, for example that the RFP wants fifty million dollars, which is above the five million dollar limit.

Every No Go comes with a full reason in plain words. It says what the RFP is asking for, which company rule it breaks, and what that means for the bid. This makes it easy to explain the decision to a manager.

The Bid Readiness Score

The Bid Readiness score is one single number out of one hundred. It shows how ready this RFP is in one glance. The tool grades how well the RFP matches each checklist item, and the Bid Readiness score is the average of these grades across all the items. The tool also gives each of the four departments its own score out of one hundred, so you can see which area is strong and which one needs more work. If a strict company rule is broken,

the score is set aside and the result is shown as Blocked, which means No Go. This keeps the meaning clear, because a document can look good on paper and still be a No Go when it breaks a strict rule.

The Technology I Used

The most important design choice is that the whole tool runs on your own computer. It does not send anything to the internet and it does not need an internet connection while it works. It uses no online service and no secret key. This was a key requirement, because the tool has to run inside the company on company machines, and no private RFP information should ever leave the computer.

- The thinking part is a small local AI model called MiniLM. Its full name is all MiniLM L6 v2. It reads and understands the meaning of the text.
- For scanned documents I added an OCR reader called RapidOCR, which turns pictures of pages into text.
- The tool reads normal PDF and Word files with small helper tools that come with Python.
- The screen you see is built with a simple and clean web tool called Streamlit.

Because the AI model is stored inside the project folder, the tool works fully offline from the very first moment, with nothing coming from any outside account.

A Walk Through The Screens

Here are the main screens of the tool. Paste the matching screenshot in each place shown below.

The Home Screen

This is the first screen. It has a short title and an upload box where you drop the RFP file. There is also a button on the side to load a sample RFP for quick testing.

The Results Summary

Right after the file is read, the top of the screen shows four cards, which are the Bid Readiness score, the number of requirements addressed, the number of requirements missing, and the number of deliverables found. Below them a colored banner gives the final Go or No Go suggestion with a short reason.

The Checklist Review

This is the main review screen. It shows four colored cards, one for each department, and each department has its own score out of one hundred. Inside each card every checklist item has a small tag that says Go, Review, or No Go, a short line that explains why, and its match strength.

Checklist Review

Deliverables

Evaluation Criteria

Decision Rules

Checklist Review - graded by department

Each SPS checklist item is judged against the RFP. GO means addressed and compliant, REVIEW means not found or needs a manual check, and NO-GO means a hard company rule is broken. The score on each department is the average match strength for its items.

Financial / Accounting

80 / 100

Payment Terms

match 63%

GO

Addressed in the RFP: payment terms requiring payment in less than 30 days will be regarded as

Financial Stability Requirements

match 45%

GO

Addressed in the RFP: social security numbers, or financial transactions, bank, credit, and tax information.

Insurance Requirements

match 66%

GO

Addressed in the RFP: MINIMUM INSURANCE COVERAGES AND LIMITS REQUIRED FOR MOST CONTRACTS:

Profitability Analysis

match 55%

GO

Addressed in the RFP: costs, calculations and projections on contracts having similar scope and

Bid Bond / Performance Bond

match 64%

GO

Addressed in the RFP: surety on its payment and performance bonds.

Legal

85 / 100

Eligibility Criteria

match 71%

GO

Addressed in the RFP: requirements and provide required certifications or documentation.

Capability (Personnel & Knowhow)

match 64%

GO

Addressed in the RFP: Identify roles and responsibilities of key personnel, provide resumes of proposed

Compliance Requirements (Laws & Regulations)

match 57%

GO

Addressed in the RFP: Mandatory requirements are those required by law or regulation or are such that they

State Registration

match 55%

GO

Addressed in the RFP: business in Virginia or elsewhere, by delivery to any officer or management/supervisory

E-Verify

match 62%

GO

Addressed in the RFP: Verify to prove that they are enrolled in E-Verify.

Contractual Obligations

match 64%

GO

Addressed in the RFP: other type of contractual compensation or damage other than those provided by the

Operations

82 / 100

Required Forms & Certifications

match 63%

GO

Addressed in the RFP: requirements and provide required certifications or documentation.

Submission Deadlines

match 61%

GO

Addressed in the RFP: the Closing Date and Time shown on the cover page of this Request for Proposal.

Document Compliance (Format & Submission)

match 56%

GO

Addressed in the RFP: requirements and provide required certifications or documentation.

Signatory Authority

match 57%

GO

Addressed in the RFP: that is beyond the duly granted authority of the signatory to bestow or incur on behalf of the

MBE / Small Business Participation

match 55%

GO

Addressed in the RFP: Small Minority-Owned Business, and/or Small Women-Owned Business shall

Vendor Registration

match 65%

GO

Addressed in the RFP: "Vendor" or "the Vendor" means the contractor, firm or organization that is selected to

Technical

77 / 100

Scope of Services / Products

match 49%

GO

Addressed in the RFP: providing IT services, cloud storage, payment processing, healthcare technology, and other data

Technical Requirements

match 57%

GO

Addressed in the RFP: requirements and provide required certifications or documentation.

Compliance with Industry Standards

match 62%

GO

Addressed in the RFP: Institute of Standards and Technology (NIST) SP 800-88 guidelines relevant to data

Security Considerations

match 58%

GO

Addressed in the RFP: Enhanced network security requirements.

Integration Needs

match 50%

GO

Addressed in the RFP: Integration and Technical Fit: Describe compatibility with Drupal and related web technologies,

The Deliverables

This tab shows a clean list of everything the client wants the company to provide, written as short and clear points.

Checklist Review

Deliverables

Evaluation Criteria

Decision Rules

Deliverables - what we need to provide

Furnish to the University all such information and data for this purpose as may

Provide a minimum

Provide with their response (and/or no later than ten (10) business

Provide additional goods and/or services that may be required by the University during the Term of

Provide trained personnel who shall be qualified to properly

Maintain a formal security program in accordance with industry

Ensure backups are successfully completed daily or more frequently and

Maintain an uptime of 99.99% or greater, as agreed to for the contracted

Provide access to University Data only to its employees and

Ensure that the Vendor's employees who perform work under this

Ensure that such transfer/migration uses facilities

Implement its exit plan and

Ensure that its employees who will have potential access to University

The Decision Rules

This tab shows the strict rules that were checked, such as payment terms and insurance, with the full reason for each decision. This is where a No Go is explained in detail.

Why This Tool Is Useful

- It saves hours of reading for every RFP.
- It keeps all data on the company computer, so nothing private leaks out.
- It works without the internet and without any paid service.
- It makes sure no rule is missed, which protects the bids.
- It gives a clear Go or No Go answer with reasons, so decisions are faster and easier to defend.

Summary

In short, this tool turns a long and tiring RFP into a short and clear summary in seconds. It reads the document, understands it, compares it with the company checklist, and gives a simple Go or No Go answer with full reasons. It runs safely on company computers with no internet and no outside service, which makes it ready to use inside the company.
